

Module-7 Selenium-testNG

Problem Statement 1: Implementing Data Providers Develop a program that demonstrates the use of data providers in TestNG. Implement data-driven tests by using the `@DataProvider` annotation and providing test data from external sources. Showcase the flexibility and reusability of data-driven testing

```
package testNG;

import org.testng.annotations.DataProvider;
import org.testng.annotations.Test;

public class DataProviderExample {

    @DataProvider(name="userData")
    String[] getUserData() {
        String[] userDetails = {"user1 details", "user2 Details"};
        return userDetails;
    }

    @Test(dataProvider="userData")

    void testUserData(String user) {
        System.out.println(user);
    }
}
```
